May 5, 2015

Elliott,

We have three children, twin girls 15 and our son who is 11. All three of them participated in their first programing camp with your group last summer.

Our experience was extraordinary. All three of them thoroughly enjoyed the program. I was able to observe our children several times through the week and witnessed first hand their high level of interest and engagement. Our instructor, Shawn Reichert, was excellent and he was able to connect with each of them individually.

Our children have done many camps through the years and this was absolutely one of the most unique programs they have ever participated in. Our twin girls began grade 10 programming this year at school and I believe your program helped them with the course in several ways, both technically as well as giving them the confidence that they could learn the language, apply logic to create code and routines that actually work.

I also appreciate how you helped us select the proper course level for our family. The assessment and our conversations were extremely helpful and I am confident that this contributed to the success of the overall experience.

Thank you for the great learning experience. I highly recommend your program.

Respectfully,

Cole Dolny
